

Novotech embarks on a new strategic partnership with Citeline, designed to accelerate patient recruitment and complete clinical studies more quickly.

April 15, 2010

Novotech embarks on a new strategic partnership with Citeline, designed to accelerate patient recruitment and complete clinical studies more quickly.

NEW YORK – 15/4/10 – Novotech, a leading Australasian CRO, has engaged Citeline to support its clinical development programs and further improve the rate at which Sponsor clinical studies are planned and carried out.

Citeline, the leader in global pharmaceutical intelligence solutions, today announced Novotech will utilize Citeline's TrialTrove® to better define their competitive clinical landscape and SiteTrove® to assist in identifying and tracking clinical trial sites and investigators on a worldwide basis.

“As the most comprehensive clinical trial tracking service in the marketplace, our investment in TrialTrove® and SiteTrove® will bring immense benefit to Novotech and our Sponsors in assessing feasibilities and planning new clinical trials in the region,” said Novotech CEO Alek Safarian .

Novotech, which is headquartered in Australia with a management-hub in Malaysia and offices throughout the region, currently manages trials in 9 Asia Pacific countries, including India, Australia, South Korea and Taiwan.

“Our association with Citeline is in keeping with our history of always striving to bring the best combination of technologies and people available in the marketplace for the benefit of our Sponsors worldwide,” said Safarian.

This partnership adds to Citeline's already impressive list of clients. Novotech joins an increasing number of CROs in incorporating TrialTrove® and SiteTrove® into their business process.

“A lot of costly delays in clinical study programs can be avoided with access to accurate intelligence and by a data led approach to investigator selection,” says Robert Roseberry, Commercial Director for Citeline Asia Pacific. “TrialTrove® monitors over 100,000 individual clinical trials worldwide and the SiteTrove® service currently tracks the trial activities of over 190,000 clinical investigators, meaning we are well placed to provide unrivalled levels of intelligence to our clients in this sector.”
